MANAGEMENT PLAN FOR KATHLOUR-KUSHLIAN WILD LIFE SANCTUARY (2012-13 TO 2021-22)

By

Sh. Rajesh Kumar, PFS,
Divisional Forest Officer (W.L)
PATHANKOT.

Under the able guidance of
Sh. R.K.Mishra, IFS
CF (Wildlife) Shiwalik Hills Circle &
Sh. Dhirendra Singh, IFS
Chief Wild Life Warden, Punjab

Department of Forests and Wildlife Preservation, Punjab.

PART-I

THE PROTECTED AREA: EXISTING SITUATION

	INDEX

9.	ORGANIZATION AND ADMINISTRATION.		
10	THE PROPOSAL BUDGET AND SCHEDULE OF	44	
	OPERATION		
	PART-III ANNEXURE		
ANNEXURE-I	RAINFALL DATA RECOREDED AT PATHANKOT FOR	46	
	THE LAST FIVE YEARS.		
ANNEXURE-II	LIST OF FLORA IN THE SANCTUARY	48	
ANNEXURE-III	LIST OF ANIMALS FOUND IN THE SANCTUARY	49	
ANNEXURE-IV	LIST OF EQUIPMENT (AVAILABLE & REQUIRED)	51	
ANNEXURE-V	LIST OF WATCH TOWER (AVAILABLE & REQUIRED	52	
ANNEXURE-VI	LIST OF FOREST ROADS	53	
ANNEXURE-VII	LIST OF TUBEWELL, BOARING, PUMPING SETS AND	54	

	WATER SOURCES.		
ANNEXURE-VIII	LIST OF ILLICIT FELLINGS.		
ANNEXURE-IX	LIST OF PROTECTED AREA VALUES.		
ANNEXURE-X	LIST OF VILLAGES FALLING WITH IN 10 KMs OF	57	
	SANCTUARY		
ANNEXURE-XI	LIST OF PROBLEMS IN KATHLOUR-KUSHLIAN WILD	58	
	LIFE SANCTUARY.		
ANNEXURE-XII	LIST OF ARMS LICENSES OF THE VILLAGES WITHIN		
	THE LIMITS OF 10 KMs.		

CHAPTER-1

1. <u>INTRODUCTION TO THE AREA.</u>

The area of the sanctuary falls in the river bed of the Ravi river and its tributaries passes through the sanctuary. This area was purchased and transferred to Forest Department in lieu of the land for compensatory afforestation equal to the forest land submerged during the construction of Ranjit Sagar Dam. The area was planted by the forest department and then was handed over to Wildlife Department during the year 2006. Later on it was felt that the area should be declared as Wild life Sanctuary. On the directions of higher officer of the Forest and Wildlife Preservation Department Punjab. The Forest of Villages Kathlour & Kushlian were notified as a Wildlife Sanctuary vide Punjab Government Notification No.34/4/2007Ft-5/6088 dated 22-06-2007.

1.1 NAME, LOCATION, CONSTITUTION AND EXTENT OF AREA.

The name of Wildlife Sanctuary is Kathlour-Kushlian. The notified area of Kathlour-Kushlian wild life sanctuary is 1896 acre. The whole area of Wild Life Sanctuary falls in five villages named Kathlour, Raipur, Bahadurpur, Jaswa & Kushalian.

1.2 APPROACH AND ACCESS.

The sanctuary is located about 30 km from Gurdaspur and about 15 km from Dinanagar on Dinanagar - Narot Jamal Singh road. There is no direct rail link and the nearest rail head is Dinanagar. The nearest civil airport is Pathankot /Amritsar which is about 100 kms from the sanctuary. The state transport buses ply from Gurdaspur to Dinanagar from where one can go up to Sanctuary by local means.

1.3 **STATEMENT OF SIGNIFICANCE.**

Kathlour-Kushlian Wildlife Sanctuary is situated in the River bed area of Ravi River. It has special ecological and biological significance. Being located between plains and hills, it provides a habitat to variety of organisms that are found in plains as wells as in hills. The rare species of wild animals and birds like Barking Deer, Pangolin, Python and Khaleej pheasant add further to the significance of the protected area. Sometimes carnivores like leopard also migrate to the area from bordering state of Himachal Pradesh. The area provides ample opportunity to nature lovers for bird watching as the Ravi River during winter months add picturesque beauty to the area. The area has been important from research point of view as it offers a suitable place to study flora & fauna and other micro organisms.

CHAPTER-2

2.0 BACK GROUND INFORMATION AND ATTRIBUTES.

2.1 BOUNDARIES.

Name of	Locality	Boundaries
District		
Pathankot	Government Protected	East- Village Gajju Bailley
	Forests of Kushlian	North- Village Gajju Khalsa
	(346 acres)	West- Village Akhwara,
	Tehsil, Pathankot,	Chak Kshalian and Dhussi Bandh
	District Pathankot.	in the North West.
		South- Village Bharial, Harchanda
		and Akhwara.
	Government Protected	East- Village Jaswa
	Forests of Kathlour	North- Village Bahadurpur
	(1550 acres)	West- Touching boundary of
	Tehsil, Pathankot.	Village Kohlian and
	District. Pathankot.	Dhussi Bandh in the North West.

Total: 1896 acres.

2.2 <u>TERRAIN</u>

The terrain is mainly Plain Riverian tract of Ravi river. The terrain is very suitable for in habitation of species like barking deer, hog deer, wild boar, Sambhar etc.

2.3 CLIMATE

Climate is typical of the foothill ranges of the Shiwalik belt of Distt, Pathankot. The climate can be divided into three seasons namely.

2.3.1 WINTER

Winter is severe and misty. Winter starts from November and after crossing the peak in December ends in mid March. Temperature falls up to 1°c during peak winter.

2.3.2 SUMMER

Summer is hot and harsh. It begins from early April and extends up to October. June is the hottest month. Temperature rises up to 46°c during peak hours.

2. 3.3 **MONSOON**

Monsoon starts from July and extends to mid September. The rainfall data of the Sanctuary for the last five years is given at **Annexure-1**

2.4 <u>TEMPERATURE</u>

Temperature ranges between almost freezing levels to above 46°C.

2.5 WATER SOURCES

As the Habitat is on the river bed, mainly there is no scarcity of water as such.

2.6 RANGE OF WILDLIFE, STATUS, DISTRIBUTION AND HABITAT.

2.6.1 **VEGETATION**.

2.6.1.1 FOREST TYPES.

The vegetation is mixed deciduous type comprising tree species like Shisham, Khair, Ber, Subabul, Acacia, Dhak, Drek, Siris, Toot, Mango, Arjan, Pipal, Bohr, Sembal, Jaman, Guava, etc. List of species found is given at **Annexure-II**. Most of the area has been covered with lantana. Removal of lantana is immediately required in a scientific and phased manner to ensure the incoming of new soft and palatable grasses for the herbivores.

2.6.1.2. PLANTATIONS

No major plantation works are required in the sanctuary as the area in already under thick crown cover. Plantation work of Shisham, Ficus, mulberry etc is required in a small and phased manner.

2.6.1.<u>3 GRASS LANDS</u>

There are no vast grass lands in the sanctuary due to heavy invasion of lantana. There is good canopy cover of big trees like Shisham, Kikar, Pipal, Ber, Siris, Toot, Simbal, Bamboo, etc. The major grass species are Dhub and Baggar. Most of the area of the Sanctuary has been covered by weeds like Lantana, which can be removed in a phased manner. Already some area is prepared as grass land but more inputs are required.

2.6.2 **FAUNA**

No census of animals is ever carried out. However in future periodical census exercise had to be taken. Main faunal species are Sambar, Hog deer, Barking deer, Jungle Cat, Jackal, Common Indian Hare, Mongoose, Wild boar, Pangolin, Rat Snake, Cobra, Python, Monitor lizard, Garden lizard, etc. A List of animals is given in **Annexure-III.**

2.6.2.1 VERTEBRATES-STATUS:

The following are the Vertebrates found in the Sanctuary.

- 2.6.2.1.1 Order Choeroptera-Fruit Bats.
- 2.6.2.1.2 Order Pholidata-Indian pangolin.
- 2.6.2.1.3 Order Primates-Rhesus Monkey.
- 2.6.2.1.4 Order Rodentia-Procupine, common squirrel.
- 2.6.2.1.5 Order Carnivora-Jungle Cat, Jackal, Mangoose, Civet.
- 2.6.2.1.6 Order perissodactyla-Barking deer, Sambar.
- 2.6.2.3 Reptilia-Python, rat snake, cobra.
- 2.6.2.4 Amphibian: Common Frog.
- 2.6.2.5 Pisces-Water is flowing. Fish species not found.
- 2.6.2.6 Invertebrates: Butter Flies and moths
- 2.6.2.7 Birds: Khalij Pheasant, Peacock Pheasant, Blue Rock Pigeon, Spotted Dove, Little Brown Dove, Collared Dove, Black Partridge, Grey Partridge, White Breasted Kingfisher, Common Kingfisher, Hoopoe, Grey Hornbill, Golden backed woodpecker, Small sky Lark, Yellow Headed Wagtail, White Wagtail, Red Vented Bulbul, Jungle babbler, Large Grey Babbler, Common myna, Pied myna, Common crow, Quail, Jungle crow, Black Drongo, Crow Pheasant, Black winged kite, Red wattled lapwing.

A systematic Zoological survey is needed.

CHAPTER-3

HISTORY OF MANAGEMENT AND PRESENT PRACTICES.

3.1 GENERAL

A comprehensive management plan is being prepared for the first time. An annual plan of operations for management and improvement of Wildlife Habitat was prepared. But that plan was not as per the guide lines of MoEF. So this management plan is being prepared.

3.2 <u>HISTORY OF MANAGEMENT</u>.

This is the first ever management plan to be written as per guidelines of Ministry of Environment & Forests, Govt of India. However there was no planning in the implementation of wild life development works. In order to ensure continuity of planning the sanctuary requires a comprehensive management plan for at least ten years duration. So this is an attempt to prepare a detailed and time bound plan to be adopted during the coming ten years. This plan will encompass the detailed proposals and their mode of implementation with recurring and non-recurring expenditure.

3.3 <u>ILLEGAL ACTIVITIES.</u>

The sanctuary being open from all sides, it is prone to illegal activities like poaching, grass and wood collection by neighbouring villages.

3.3.1 POACHING

Though every attempt has been made to check hunting yet the openness of the area always keeps the possibility of poaching alive. To check the cases of poaching a continuous trench is dug out all around the sanctuary strengthened with thorny bush fencing. A new check post is being constructed in the sanctuary.

3.3.2 ILLEGAL FELLING OF TREES

The sanctuary is full of woody trees like Shisham, Kikar and Khair. This is a big allurement for people around for wood works in houses. The details of illicit felling cases and their status is given in **Annexure-VIII**

3.3.3 ILLEGAL REMOVAL OF FUEL WOOD

The area is prone to fuel wood collection by all villages around. Adequate protection measures have been adopted which need to be reinforced as a future strategy. More protection through night and day patrolling by Watchers is needed.

3.3.4 ENCROACHMENTS

The Sanctuary area is free from any kind of encroachment. The boundaries are demarcated and boundary pillars enacted and continuous trench is dug out all around the sanctuary for future protection.

3.3.5 LIVE STOCK GRAZING.

The sanctuary is open from all the sides. Grazing is prohibited in sanctuary. There were no check posts on the periphery and mobile patrolling is done to ensure that there is no grazing. Sanctuary is not fenced as yet. Only thorny bush fencing is done recently which is providing a deterrent to grazing.

3.4 WILD FIRE

Most of the sanctuary area is invaded by Kana, Kahi and Lantana. So chances of fire incidents to take place are very high during hot summer season. In addition to paths which are presently being used and maintained as fire lines, an additional 10 k.m. of fire lines are needed to be prepared. In recent past old fire lines which were very narrow were widened upto 7 mtr.

3.5 <u>RESEARCH AND MONITORING.</u>

At present no such activity is being undertaken for want of facilities and staff. But research and monitoring is the dire need. For this purpose additional staff and paraphernalia is required.

The Important aspects of research which can be considered are under as:-

- 1. Socio Economic impact of Sanctuary on villagers.
- 2. Man-animal relationship in Sanctuary.
- 3. Study of Python in Sanctuary.

- 4. Study regarding Pangolin in Sanctuary.
- 5. Population of Hog Deer.

3.6 TRAINING.

The staffs posted in the sanctuary is neither trained nor sufficient. The only trained staff for the sanctuary is DFO (Wildlife). More staff training is required at periodic intervals.

3.7 CONSERVATION STRATEGY AND EVALUATION

No coherent management plan or practice has ever been in place and interventions have been few and sporadic.

3.8 ADMINISTRATION

The Sanctuary is under Control of Divisional Forest Officer Wild Life and is being managed as per provision of Wild Life (Protection) Act, 1972 and various guidelines issued from time to time. Presently field officer of rank of Deputy Ranger working as Range Officer is in charge of the sanctuary for the development of the sanctuary. It will require augmentation both in terms of rank and number of staff. The detail of which is given under heading 9.4.1. (Reorganization).

3.9.1 ROADS

The sanctuary is well connected with Gurdaspur and Dinanagar through metalled roads. Presently sanctuary has a small stretch of katcha roads and paths which need to be supplemented to ensure proper management of PA.

3.9.2 RAIL LINES

Rail line comes upto Dinanagar city from Gurdaspur Railway Junction.

3.9.3 <u>TELEPHONES</u>

There is no telephone connection in the sanctuary. But STD/PCO is available nearby.

3.10 SUMMARY OF THREATS TO WILDLIFE.

1. Threat to Habitat:

The wild life sanctuary is at the base of shiwalik ranges and prone to erosion and exploitation from all sides. The major threats to the habitat are discussed one by one as under:-

2. **Poaching:**

The sanctuary is open from all sides and prone to poaching by adjoining population and poachers from out side. Previously reported cases of poaching pertain to large herbivores. To provide enhanced protection to animal's reinforcement of infrastructure with one jeep, motorcycles, wireless network as proposed in 3.11.4, and additional staff as proposed in Chapter 9 under heading 9.4.1 is required. Other proposed measures would be mobile patrolling, temporary nakkas and permanent nakkas at periphery of sanctuary. Temporary nakkas and mobile squads would be used in adjacent areas and approach routes.

3. <u>Illicit Felling:</u>

Area is prone to illicit felling and theft of wood. Strong protection measure has to be taken to avoid damage to habitat. Shisham and Khair are potential attractions for illicit felling. Fencing of the sanctuary boundary, mobile patrolling, posting of additional staff with LCV and motorcycles would reduce the incidence of such cases.

4. **Grazing:**

Grazing is prohibited in sanctuary. There are no check posts on the periphery and mobile patrolling is done to ensure that there is no grazing. Sanctuary is not fenced as yet. There is few reported case of grazing in the sanctuary.

5. **Disease:**

Sanctuary is surrounded by villages having domestic cattle, sheep and goats. The wild species are prone to local diseases like black water, foot and mouth disease. Domestic animals falling with in 5 K.M. radius are vaccinated by Animal Husbandry Department and same will be monitored in future also. Villages falling with in 5 K.m. are Kathlour, Gajju Khalsa, Gajju Bailley, Bharial Harchanda, Akhwara, Kohlian, Bahadurpur.

PART-II

THE PROPOSED MANAGEMENT

CHAPTER-4

THE VISION, OBJECTIVES, ISSUES AND PROBLEMS

4. THE VISION

To prepare a holistic plan to rehabilitate the PA ecologically and biologically taking physical, mechanical and sociological measures and to develop the full potential of the area inclusive of the human interface with the ecosystem. This plan would be flexible to the extent the unforeseen needs emerging with time could be incorporated after due permission from competent authority.

4.1 OBJECTIVES OF MANAGEMENT

- 1. To conserve the integrity and biodiversity of the sanctuary.
- 2. To conserve the endangered, threatened and rare species of flora & Fauna.
- 3. To mitigate man-animal conflict through ecodevelopment programmes.
- 4. Capacity building of staff and community and to facilitate research.
- 5. To involve community in management of PA and to promote ecotourism & conservation awareness.

4.2 <u>ISSUES AND PROBLEMS IN ACHIEVING OBJECTIVES.</u>

Punjab being an agriculture dominant state, it is very difficult to preserve the wilderness of the sanctuary and each objective poses many problems as it is pursued for achievement.

4.2.1 **OBJECTIVE-1**

Sanctuary area is very small for the unit to be self sufficient and that makes the unfenced boundary of the sanctuary porous both ways.

4.2.2 OBJECTIVE-2

The objectives need to be achieved to preserve the area which is open from all sides and is prone to poaching, felling, grazing, erosion, fires and all kinds of exploitation which need to be tackled. This will be achieved by mobile patrolling, temporary nakkas and permanent nakkas at periphery of sanctuary. Temporary nakkas and mobile squads would be used in adjacent areas and approach routes.

4.2.3. OBJECTIVE-3

Strict vigil will have to be maintained to prevent the deterioration of present status and every effort will have to be made to add to the floral and faunal diversity of the sanctuary.

4.2.4 OBJECTIVE-4

The sanctuary is under pressure for fodder, fuel wood and agriculture land. Level of awareness and hostile attitude of the surrounding community remains a challenge which can be met through ecodevelopment programmes.

4.2.5 **OBJECTIVE-5**

At present there is a dearth of trained and properly oriented staff. The staff needs to be trained by resource persons within the department as well as from places like WII, Dehradun.

4.2.6 **OBJECTIVE-6**

Hostile attitude of the community towards PA and lack of awareness about wild life pose problems in achieving this objective. Lack of roads, paths, tracks, and interpretation centre are main bottlenecks for management. To elicit the cooperation of neighbouring villagers, ecotourism programmes will be arranged and special awareness camps will be organised. An interpretation center with audio video hall will be set up to make people aware about environment conservation. A library on wildlife and environment books will be provided in the sanctuary to promote awareness for nature conservation.

CHAPTER-5 THE STRATEGIES

5.1 **BOUNDARIES**

Demarcation of the area will be done and suitable fence will be erected.

5.1.1 **LEGAL**

- 1. Survey and demarcation.
- 2. Preparation of detailed geo-referenced Map of Sanctuary.
- 3. Fencing.
- 4. Protection.

5.2 THEMES AND PLANS.

5.2.1 MANAGEMENT OF WOOD LANDS

A balance of various vegetative strata needs to be evolved as the top cover is heavy and middle and ground covers have been suppressed. Phasing out of unwanted trees and introduction of new ones and creation of grass lands will be undertaken.

5.2.2 GRASS LAND MANAGEMENT

At present most part of sanctuary has been infested with lantana weed cover. The grasslands are very few. In a phased manner lantana will be cleared and grasslands will be created in place. The present vegetation cover will be cut and thinned to allow the ground flora to come up. A few works are already under progress.

5.2.3 WATER MANAGEMENT

In order to ensure round the clock availability of water to wild life renovation of these water holes and creation of new waterholes is of utmost importance. Creation of new artificial water resources is a major thrust area so as to prevent the animals from straying outside in search of water, which makes them prone to external threats. To conserve the water in lean period water retention dams are required to be created.

5.2.4 FIRE MANAGEMENT

To avoid fires, regular vigil will be maintained and fire-fighting equipments will be made available to the staff. Fire lines will be maintained where necessary. But sanctuary area is small. So fire incidents do occur. However, for better management of the area, anti fire measures such as staff, fire lines, one watch tower are available and three more are required. Despite these measures ten firewatchers are needed to minimize the incidents of fire. Sanctuary has been divided into compartments. A complete set of modern fire fighting equipment need to be procured to meet any eventuality. In addition to paths, which are presently being used and maintained as fire lines, an additional 10 K.m. of fire lines need to be created.

5.2.5 **PEOPLES PARTICIPATION**

Adjoining villager's participation in the conservation process is a must for smooth management. This will be achieved by implementing ecodevelopment programme. Detailed strategy regarding ecodevelopment has been given in chapter 7. An interpretation center with audio video hall will be set up to make people aware about environment conservation. A library on wildlife and environment books will be provided to promote awareness for nature conservation. For enhanced participation of community in management and protection of sanctuary, an advisory Committee vide Punjab Govt. Notification No. 34/4/2007-Ft-V/1102 dated 08.02.2013 has been set up under section 33 B of Wild Life (Protection) Act 1972 with its constitution as under: -

1. Official Members

Conservator of Forests (Wildlife) Shiwalik Circle, Punjab Ajitgarh. Chairman

2. Member of State Legislature

Smt. Seema Devi, M.L.A, Bhoa

Member

3. Three Representatives of Panchayati Raj Institution

(i) Sh. Sudarshan Kumar, Sarpanch Gram Panchayat, Kathlour Member

(ii) Smt. Darshana Kumari, Sarpanch Gram Panchayat, Jaswan Member

(iii) Smt. Sudesh Kumari, Sarpanch Gram Panchayat, Bahadarpur Member

4. Members from Dept. of Home and Veterinary (One from each)

(i) Sh. Prabhjot Singh Virk
Deputy Superintendent of Police (Rural)
Pathankot.

Member

(ii) Dr. Vijay Kumar, Veterinary Officer Veterinary Hospital, Bhoa.

Member

5. Two Representatives of NGO

(i) Sh. Kamaljit Singh (Retd,) Lay General Jail road, Gurdaspur Chairman N.G.O. Forest Environment and Wildlife Foundation. Member

(ii) Sh. Avtar Singh Randhawa (Retd,)
Director, Agricultural University, Gurdaspur
Member N.G.O. Forest Environment
and Wildlife Foundation.

Member

6 Three individuals Active in field of Wildlife Conservation

(i) Dr. Rajan Maini S/o Sh Madan Mohan Maini Lane No. 4, Mission road, Pathankot.

Member

(ii) Sh Balram Singh S/o Sh Surinder Singh Village Sahorian Tehsil & Distt Pathankot.

Member

(iii) Sh. Sanjeev Singh S/o Sh Kamal Singh Village Sahora Tehsil & Distt Pathankot.

Member

7. Dr. Sudhir Kumar Mahotra S/o Sh Charanjit Rai BX-72 Ishwar Nagar, Dalhousie road, Pathankot. (Proposed Honorary Wildlife Warden).

Member

8. Divisional Forest Officer (Wildlife) Pathankot.

Member Secretary

5.2.6 **WILDLIFE HEALTH**

Health of the wild life will be taken care of by providing fresh and clean water, suitable habitat and immunisation of livestock outside the PA against known diseases like black water, foot and mouth diseases.

5.2.7 **INVOLVEMENT OF NGO'S**

Local NGO'S will be involved in the management where desired process to make it two way and more effective.

5.2.8 ROADS PATHS AND TRACKS.

Presently sanctuary has a small stretch of katcha roads and paths which needs to be supplemented so as to ensure proper management of PA and to explore potential of ecotourism in sanctuary. Another stretch of 10 km katcha road & 15 km path on the periphery of PA would be required. Out of wich 5 Km path on the periphery is already prepared.

5.2.9 **RESOURCE MOBILISATION**

All effort would be made to mobilise financial resources through state, central and international funding for implementing strategies.

CHAPTER - 6

<u>A-ECOTOURISM INTERPRETATION AND CONSERVATION</u> <u>EDUCATION</u>

Awareness camps, quiz and painting competitions for the school children, local community would be arranged to sensitise them about conservation of forest and wild life. Brochures and pamphlets on this theme would be provided free of cost to school children's, local community and tourist so as to spread the message of conservation in a speedy manner. Audio-visuals at interpretation centre would be an effective tool to achieve this objective. Local community would be taken on exposure visit to PA's out side the state and to Chhatbir Zoo to further achieve this objective. Community would be able to see and get first hand information about conservation and ecotoursim so as to replicate here also.

B-CONSULTANCY AND INVOLVEMENT OF N.G.O.'s

In order to maximise the harnessing of ecotoursim potential consultancy services of repute and experience in this field would be hired. At the same time N.G.O's would be involved to achieve in a more meaning full way.

CHAPTER - 7

7.0 **ECO-DEVELOPMENT.**

7.1 **GENERAL**

As mentioned earlier biotic pressure in zone of influence poses a constant problem in management of Protected Area. To ease out this biotic pressure, involvement of community in zone of influence becomes a necessity for a better management and implementation of conservation measures. It becomes essential that management should be receptive to genuine problems of the community towards P.A. and its management. This issue can be effectively tackled through ecodevelopment by taking up developmental activities, which will reduce pressure on PA and alleviate their daily life hardships. This will not only dampen the hostile attitude of community but will also result in building up of mutual trust and rapport with community.

7.2 OBJECTIVES

- 1. Mitigating man animal conflict.
- 2 To reduce pressure on wild life habitat by minimising forest resource depletion.
- To elicit participation of the community in conservation and management of PA by adopting participatory approach.

- 4 Organising community into village level Institutions (VLI's) like Self Help Groups (SHG's), user groups and building up their capacity through trainings and exposure visits.
- 5. Empowerment of community so as to improve their socio economic status by augmenting alternative means of live hood through Income Generating Activities (I.G.A's).
- 6. To raise awareness level among local community regarding conservation of natural resources and sustainable development approach.

7.3 <u>FOREST DEPENDENCY AND CONFLICTS IN ZONE OF INFLUENCE.</u>

In villages constituting zone of influence there are arable lands adjacent to P.A where agriculture is practised. But boundary of P.A being porous, wild animals like Sambar, Wild Boar and Blue bull stray into these arable lands and badly damage the crops. This not only brings in hostile attitude of community towards wild life, but it also makes wild life susceptible to external threats of poaching. People depend upon forest for grazing their livestock because trend for stall feeding livestock is not prevalent. The arable chucks of land in periphery increase the verv encroachment in PA. PA being a considerable patch of risk of forest area and having good vegetal cover becomes an attraction for the region to dump their stray cattle. Community still uses fuel wood for their domestic use thus making them dependent the

adjacent forests. Due to restrictions on these activities in P.A and damaging of their crops by wild life and encroachments man-animal conflict is prominently visible on ground.

7.5 **FUTURE STRATEGY**

7.5.1 ECO DEVELOPMENT ZONE

All the villages surrounding P.A namely Makhanpur, Chandigarh, Raji bali, Gaju Jagir, Kathlour, Jaswa, Kiri, Kolian, Bahadurpur, Narot Jamal Singh, falling in zone of influence mainly will be initially taken up for ecodevelopment works. However in case of good results on this front this activity can be further extended to villages falling within 5 Kms of sanctuary.

7.5.2 CONSTITUTION OF VILLAGE ECO-DEVELOPMENT COMMITTEES AND THEIR BYELAWS.

To ensure participation of community in planning execution and monitoring of eco-development interventions Village level Ecodevelopment Committees (E.D.C.s) would be constituted in each target village and their byelaws framed before starting with the preparation of their micro plan so as to ensure need based and prioritised development in a tailor made fashion. EDC's would be sensitised through training and exposure visits regarding their roles and responsibilities.

7.5.3. PREPARTATION OF ECODEVELOPMENT PLAN.

An ecodevelopment plan would be prepared separately for each village. This will be done by the staff and EDC using PRA technique. Each Micro plan will include complete socio-economic village profile, problems prioritised and plans for their redresses. A comprehensive need based micro plan for each village will ensure continuity of planning. While preparing plan it will be ensured that socio-economic condition, gender issues and equity is kept in mind. Negotiations would be done with community regarding possible cost sharing in various ecodevelopment activities.

7.5.4 ENTRY POINT ACTIVITIES.

Entry point Activities would be carried out as conceived in the micro plan of each village. Probable entry point activities would be.

- (i) Fencing around private arable lands on 50% cost sharing basis, which will be maintained subsequently by the concerned stakeholders.
- (ii) Community asset creation.
- (iii) Development of non-conventional energy resources like solar cooker, Solar lights, Solar pumps, Solar water heater, Gobar gas plants etc.
- (iv) Supply of sport kits to local youth.

- (v) Trainings on income generating Activities.
- (vi) Supply of cattle sheds, mangers and chaff cutters to economically weaker sections.
- (vii) Creation of basic rural infrastructure.

7.5.5 MITIGATING MAN ANIMAL CONFLICT.

- (i) Bio-fencing with dead & live material using ditch on outer side is preferable solution for fencing and demarcation of sanctuary. This will also help animal movement specially towards river side.
- (ii) As mentioned in entry point activities provision would be made to provide fencing privates around arable lands on 50% cost sharing basis. Small landholders can form group to make this activity cost effective. Solar electric fencing could be a cost effective option. Individuals or user groups would be responsible for maintenance of this fencing.
- (iii) In order to check menace of stray cattle efforts would be made by all EDC's to maintain records of their livestock in respective villages. Existing stray cattle would be rehabilitated in Gaushalas which will be managed by EDC's and concerned panchayats. EDC's with the help of panchayats will ensure that no stray cattle is released in the sanctuary from other villages of the region.

7.5.6 AGROFORESTRY

People living in the surrounding area of the sanctuary will be encouraged to undertake plantation of agro forestry species like popular, Burma Dhek and Clonal eucalyptus to supplement their income so as to reduce biotic pressure on PA. This would also solve their problem of damage to their crops by wild animals. Inter cropping of aromatic grasses like lemon grass, citronella would be encouraged.

7.5.7. MEDICAL FACILITY

Medical facilities are already available in the nearby areas.

7.5.8. EMPOWERMENT OF COMMUNITY.

Community will be organised in to various village Level Institutions like Self Help Groups and User Groups. Existing self help groups would be adopted. Several capacity building measures like trainings, visits and camps would be organised to promote exposure Generating Activities [I.G.A.'s] which would wean away Income community from their dependency on forests. Though maximum thrust would be on capacity building but these VLI's can be financially supported by department for promotion of group Income generating Activities provided they are ready for cost sharing. Natural resources based I.G.A's like Basket making,

Rope making, Socks making, Tailoring and Embroidery, Amla shredding, Pickle making, Honey bee keeping, Sericulture, Poultry, stall fed dairy units would be encouraged. In order to encourage stall feeding cattle sheds, chaff cutters and mangers would be provided for unprivileged weaker sections of society which would not only reduce pressure on PA but would also improve their economic condition and dampen their hostile attitude towards PA management. Local youth would be taken on exposure visits to other part of country to have first hand information about scope and potential of ecoturisum. They will be further motivated and empowered to take up this activity by improving their entrepreneurships kills through Entrepreneurship Development Programmes.

7.5.9 <u>COMPENSATION</u>

Government of Punjab has already made provisions to give compensation to individuals in case of injury/ death by wild animals including snake bite. There is also provisions for compensation for crop damages by wild animals.

7.5.10 INVOLVEMENT OF N.G.O.'s

All interested individuals and organisations will be approached to get their assistance in developing the sanctuary.

7.5.11 MONITORING AND EVALUATION

The input of eco-development efforts will be closely monitored and evaluated at the office level and required changes will be effected from time to time Parameters will be evolved for the purpose involving all the stakeholders.

7.5.12. KEY POINTS FOR SUCCESS OF THIS PROGRAMME.

It is essential to keep following key points in mind for effective implementation of eco-development plan.

- i) Proper by elaws for EDC's should be in place.
- ii) Regular meeting of EDC's for establishing rapport and mutual trust.
- iii) Proper Implementation of entry point activities with sufficient accountability and transparency measures.
- iv) Attitudinal changes in staff through training and exposure visits within and outside state.
- v) Effective motivation of community and its capacity building through training and exposure visits.
- vi) Honouring commitments made to community in time bound manner.
- vii) Acknowledging efforts of good VLI's and individuals contributing in this field.

CHAPTER - 8

8.0 RESEARCH, MONITORING AND TRAINING.

8.1 **GENERAL**

So far no such activity has been undertaken in this wildlife sanctuary. But for the scientific management of flora and fauna and for the evaluation of other biotic factors, research and monitoring is direly needed. To execute such duties the training of staff is also essential.

8.1.1 IN HOUSE RESEARCH

To begin with the staff will be encouraged to take up research. The guidance of trained officers will be solicited for the purpose.

8.1.1.1 DATA COLLECTIONS

Staff strength will be increased and specific work of data collection regarding census and survey will be entrusted to them. If need be expert help from PAU and GNDU will also be associated.

8.1.1.2 MONITORING OF VEGETATION

The land use pattern will be monitored and addition and deletion of present flora will be undertaken in phases.

8.1.1.3 MONITORING OF ANIMAL POPULATION, HEALTH AND DISEASE.

Animal population shall be continuously monitored for health & diseases.

8.2 <u>RESEARCH STRATEGIES.</u>

Research work will be entrusted to experts from PAU and GNDU. Local data collection such as census, categorisation of habitat, etc will be done by the local staff. Probable subjects which are worth taking for research are enumerated as under: -

- 8.2.1 Man-animal relationship in Sanctuary.
- 8.2.2 Study of Python in Sanctuary.
- 8.2.3 Study regarding of Pangolin in Sanctuary.
- 8.2.4 Population of Hog Deer.

8.3 **LIBRARY**

Library on wildlife and environment related books will form a part of interpretation centre.

8.4 **DATA STORAGE**

To keep the data safe computer facility will be provided.

8.5 CHECK LISTS

Local staff with the help of experts from PAU and GNDU will prepare check lists of flora and fauna.

8.6 TRAINING.

Staff posted in the sanctuary will be duly trained for their job. Capacity building of the community will be taken up for their mainstreaming in the conservation process.

8.7 ON THE JOB TRAINING.

In the beginning staff/community will get training from the seniors who are already trained.

8.8 **FORMAL TRAINING**.

Staff/community will be sent for training at WII, Dehradun, Veterinary Institute, Izatnagar, Bareilly (UP) and other places of repute. They will also be taken on exposure tours to some of the prominent PA's of the country.

CHAPTER-9

9.0 ORGANISATION AND ADMINISTRATION

9.1 GENERAL

At present the sanctuary is one unit attended by one wild life division at Pathankot. The new set up will have staff as incharge, assisted by one Range Officer and Forest Guard's and Peon, Chowkidar and Driver/operator.

9.2 **OBJECTIVES**

The new set up aims at managing the PA on scientific lines and envisages all round development of the sanctuary including management of habitat, ecotourism, eco development and research and training.

9.3 **PROBLEMS**

The new setup will require addition of posts, vehicles, equipments and buildings involving additional expenditure. All state and central resources will have to be tapped for the purpose.

9.4 **STRATEGIES**

For the time being additional charge will be given to other officer but in due course a new set up has to come up.

9.4.1 **REORGANISATION**

Following staff is needed at Range level: -

1)	Forest Ranger	-	1
2)	Forester	-	1
3)	Clerk	-	1
4)	Driver/operator	-	2
5)	Forest Guard	-	2
6)	Peon	-	1
7)	Chowkidar	-	1

9.4.2 HUMAN RESOURCES DEVELOPMENT

Due care will be taken for their living, medical, conveyance and family welfare facilities. Training will form an integral part of this component.

9.4.3 <u>DEVELPMENT AND UPKEEP OF INFRASTRUCTURE</u>

To run the new set up more vehicles and paraphernalia need to be added. Pickup Jeep, Motorcycle, TV, Multi Media Projectors, Films and Slides, etc will be purchased and maintained. Fire fighting equipments will be of utmost importance.

9.4.4 PROVISION OF STAFF AMENITIES

Due attention will be given to staff and their families. Schooling, hospital, recreation, conveyance and emergency facilities will be made available in/near the sanctuary itself.

CHAPTER - 10

Budget Proposals Kathlour-Kushlian Wildlife Sanctuary.

Sr. No	Detail of Work	Amount to be spent during 2013-2022			
1	Survey and Demarcation	In Lacs.			
	(a) The WLS will be surveyed, mapped, demarcated using boundary Pillars.	4.0			
	(b) Rising of bushy hedge along both side of fence.				
	Total-	10.0			
2	Infrastructure Development				
	Purchase of Pickup van/Jeep, Fire fighting tools, multimedia projector, Binoculars, Laptop, Computers, Printers, Forensic kits, Tranquilizing gun, Pistil, Mobiles etc.	20.0			
3	Transportation				
	Purchase of Tractor, trolley, Water Tankers & other accessories motor cycles.	13.0			
4	Miscellaneous				
	Development of solar powered lighting, Toilet facilities, Watch tower, Check Barrios, Transporting cages, Furniture for office and check posts, Electric generator.	30.0			
5	Habitat Improvement				
	Removal of invasive weeds, augmenting fodder resources, Plantation of indigenous species, creation & maintenance of fire lines.	70.0			
6	Research, Management & Health				
	Wildlife census, making animal shelter cum rescue area with veterinary facility 10m x 10m	20.0			
7	Eco-Tourism, Interpretation & Awareness				
	Development of interpretation centre purchase of mobile van, Books slides, Films, Signage's boards, nature camps, publicity material etc.	40.0			
8	Construction of Buildings & roads				
	Construction of Guard Quarter, Office Inspection huts, Check Posts, Inspection paths & roads (Kaccha).	35.0			
9	Training & Exposure visit.				
	Training & exposure visits of staff & nearby villagers local & national.	5.0			
10	Contingency	15.0			
	Grand Total	258.0			

Note: The above budget document is based on daily wages rate of Rs. 200/- and current market rates. It will take into account inflation factor and the prevalent daily wages rate at the time of execution of works for purposes of budget control.

ANNEXURE - II

LIST OF FLORA FOUND IN THE SANCTUARY.

(I)	Trees / Shrubs
1.	Shisham (Dalbergia sissoo)
2.	Kikar (Acacia nilotica)
3.	Bohr (Ficus bengalensis)
4.	Sirih (Albizia lebbeck).
5.	Khair (Acacia catechu).
6.	Toot (Morus alba)
7.	Amb (Mangifera indica)
8.	Jamun (Syzygium cumini)
9.	Amla (Emblica officinalis)
10.	Simbal (Bombax ceiba)
11.	Gullar (Ficus glomurata)
12.	Dek (Melia azedarach)
13.	Subabul (Laucaena loucocephala)
14.	Beri (Ziziphus mauritiana)

(II)	Grasses
1.	Dhub Grass
2.	Baggar Grass

ANNEXURE -III

LIST OF ANIMALS FOUND IN THE SANCTUARY

1. Mammals

1.	Jungle Cat	Felis chaus
2.	Jackal	Canis aureus
3.	Sambhar	Cervus unicolor
4.	Barking Deer	Muntiacus muntijak
5.	Common Indian Hare	Lepus nigricollis
6.	Wild Boar	Sus scrofa
7.	Rhesus Monkey	Macaca mulatta
8.	Common Indian Mangoose	Herpestes auropunctatus
9.	Hog Deer	Axis porcinus
10.	Chital	Axix axis
11.	Pangolian	Mains crassicaudata

II. Reptiles

1	Rat Snake	Ptyas mvcosus
2.	Python	Genus python
3.	Indian Cobra	Naja Naja

III. Birds

1.	Bulbuls (pycnonotidae)
2.	Doves including the Emerald Dove (Columbidae)
3.	Flower peckers (Dicaeidae)
4.	Junglefowl (Phasianidae)
5.	Kingfishers (Alcedinidae)
6.	Munias (Estrildinae)
7.	Mynas (Sturnidae)
8.	Owls (Strigidae)
9.	Parakeets (Psittacidae)
10.	Partridges (Phasianidae)
11.	Pheasants (phasianidae)
12.	Pigeons (Columbidae) except Blue Rock Pigeon
	(Columba livia)
13.	Quails (Phasianidae)
14.	Weaveer Birds or Bayas (Placeidae)
15.	Woodpeckers (Picidae)

ANNEXURE -IV

LIST OF EQUIPMENTS

Sr. No.	Name of Equipment	Number		
		Available	Required	
1.	Pickup van/jeep		1	
2.	Water tanker		2	
3.	Tranquilizing gun	1	1	
4.	Wireless sets	4	-	
5.	Multi Media Projector		1	
6.	Slide projector		1	
7.	LED set		1	
8.	DVD Player		1	
9.	Fire engine		2	
10.	Binoculars	2	4	
11.	Motor cycles		2	
12.	Mobiles		5	
13.	Fire fighting equipment	1 set	10 Modern set of fire fighting equipments	

ANNEXURE V

REQUIREMENT OF WATCH TOWERS

Sr. No.	Locations	Range	Avai lable	Requi red	Height	Kind	Remarks
1.	Kushlian	Pathankot	-	2	30'	Steel	For vigil
2.	Kathlour	-do-	1	5	30'	Steel	For vigil & wild life sighting

ANNEXURE - VI

28	Chela Gurdaspur	57	Chandar chack
29	Chela Chakargarh		

ANNEXURE - XI

List of Problem in Wildlife Sanctuary Kathlour-Kushlian.

- 1. There are a lot of complications due to non existence of boundary wall of the sanctuary such as infiltrations of un-owned animals into the sanctuary wandering of un-owned hard of dogs into the sanctuary not only run after the animals but to bite even members of the staff.
- 2. Most of the residential areas of the Gurjjar community are near the border of the sanctuary and due to no fencing they leave their pet animals for grazing openly in sanctuary. Many times damages reports were filled in the court but rejected on the plea that any animals had entered the sanctuary not human beings. Residential area of the Gurjjar should not be constructed less than 5 Km from the sanctuary.
- 3. Sanctuary is inhabitated by poor people who cook their food on earthen pots. Women enter the sanctuary to house fuel wood for cooking. Concerned staff is afraid off in taking action against such type of women due to flaws of laws.
- 4 Many a times wild animals wonder on roads taking risk of their life's so it very important to fence the boundary wall.
- 5 Stone crushers installed near the sanctuary cause noise and environment pollution which harm wild animals.

ANNEXURE - XII

<u>List of Arms Licenses of the Village within the limits of 10 Kms in Wildlife</u> <u>Sanctuary Kathlour-Kushlian.</u>
